The Everglades Coalition is an alliance of 61 local, state, and national conservation and environmental organizations dedicated to full restoration of the greater Everglades ecosystem, from the Kissimmee Chain of Lakes into Lake Okeechobee, through the “River of Grass,” out to Florida Bay and the Florida Keys. The Everglades is widely recognized as one of the world’s most unique and spectacular natural wonders, and Florida has a compelling interest in protecting and restoring the ecosystem due to its tremendous economic and ecologic value.

**Everglades and the Economy: Florida’s Most Valuable Resource**

Tens of thousands of jobs are supported by a healthy Everglades in Florida’s multi-billion-dollar tourism, boating, real estate, recreational and commercial fishing industries:

- Nearly eight million people—about one-third of Florida’s population—depend on the Everglades for their daily water supply.
- 1.6 million Florida jobs depend on tourism.¹
- 114,898 jobs supported by the recreational saltwater fishing industry, and contributed $8 billion to the state’s economy in 2014.²
- 14,000 jobs supported by Florida’s freshwater fisheries, contributed an additional $1.7 billion economic impact in 2014.²
- 86,000 jobs supported by the commercial seafood industry in 2017. Florida is second in the nation when it comes to highest sales, income and value-added impacts with $19.6 billion in sales impacts.²
- In 2017, U.S. fisheries supported 1.74 million jobs and contributed $244 billion in sales, with 40% of all recreational fishing trips taken in Florida.³
- Florida’s waterways have been impacted by recurrent harmful algal blooms and seagrass die offs that have damaged local economies and businesses, harmed wildlife, and threatened human health and safety:
  - The Sanibel and Captiva Chamber of Commerce and Fort Myers Beach Chamber of Commerce reported combined losses of $87 million between July-December 2018.
  - 4.4 million pounds of dead marine life removed from Lee County beaches between June-September 2018.

³ NOAA’s Fisheries Economics of the United States, 2017
In August 2018, algae discharged into the St. Lucie River from Lake Okeechobee tested positive for microcystins at a level of 495.06 parts per billion, which is nearly 50 times more toxic than the level considered safe for human contact.\(^4\)

In 2021 the Everglades Coalition urges the Florida Legislature to:

**Fully fund Everglades restoration:** The Florida legislature must reaffirm the state’s commitment to protecting our Everglades and estuary communities by supporting a budget of at least $322 million to advance the land acquisition, planning, construction, and operation of Everglades restoration projects and programs, including the Comprehensive Everglades Restoration Plan (CERP) and the State’s Restoration Strategies project for water quality.

**Strengthen protection for all waters – Everglades, estuaries, wetlands, springs, lakes, rivers, coastal waters and beaches:** Building off Governor DeSantis’ Executive Order 19-12, the Florida Legislature must engage in an overhaul of Florida’s water policy to stop pollution at its source and reduce the likelihood of recurring toxic algal blooms that have plagued the Greater Everglades ecosystem, coastal communities, and Florida’s wildlife. Legislative efforts must focus on implementing the recommendations of the Blue-Green Algae Task Force; strictly regulating the use of biosolids; fully funding the implementation and enforcement of effective Basin Management Action Plans for all impaired waters; prioritizing land acquisition to protect wildlife corridors and increase ecosystem connectivity, as well as to store and clean water; and mandating that all regional water plans account for and prioritize water for the environment.

**Reinstate strong statewide and regional land use planning to guide sustainable growth that is protective of Florida’s remaining natural areas and resources, including the taxpayer investment in Everglades restoration and Florida Forever:** The Florida legislature must reinstate the necessary authority, funding and resources for an independent state land planning agency to meaningfully oversee comprehensive land use planning. It must restore the ability of Regional Planning Councils to evaluate and challenge developments exhibiting significant regional and intergovernmental impacts. It must increase Florida Forever funding to levels compatible with priority land acquisition needs to help offset the development pressures on these parcels before they are lost or are too expensive to protect. It must restore the ability for concerned citizens to challenge developments that are inconsistent with local comprehensive plans by repealing parts of 2019’s HB 7103 that force them to pay the prevailing side’s attorney fees.

**Protect investments in Everglades restoration from the impacts of climate change through increased action in climate change mitigation, including expansion of renewable energy and energy and water efficiency; and by ensuring oil exploration and drilling projects do not undermine Everglades restoration efforts:** The Florida legislature must update laws to ban all forms of unconventional oil well stimulation, while safeguarding the home rule authorities of local governments. These actions will help reduce pressure on our natural resources and support the restoration of our Everglades. Minimization of

freshwater waste, saltwater intrusion, and flooding through expanded use of renewable and water-smart energy sources is the responsible way to plan for a growing population.

Thank you for helping us protect our Everglades, estuaries, and water supply.

Sincerely,

Mark Perry
